department_code	varchar(5)	Foreign Key	Department code assigned to the employee.
email_address	varchar(150)		Employee email address.

employee_performance

Stores yearly employee performance and work results.

Field	Data type	Key / link	Simple meaning
employee_id	int	Part of Primary Key	Identifies the employee.
year	int	Part of Primary Key	Year of the performance record.
performance_score	decimal(3,2)		Employee performance score.
projects_completed	int		Number of projects completed.
training_hours	int		Training hours completed by the employee.
attendance_rate	decimal(5,2)		Employee attendance rate.
bonus_awarded	varchar(5)		Shows whether a bonus was awarded.

finance

Stores employee pay and payroll-related information.

Field	Data type	Key / link	Simple meaning
finance_id	varchar(20)	Primary Key	Unique ID for a finance record.
basic_salary	decimal(10,2)		Employee basic salary.
tax_id	varchar(30)		Employee tax identification number.
account_number	varchar(30)		Employee bank account number.
staff_id	int		Employee/staff identifier used in finance records.
allowances	decimal(10,2)		Additional employee allowances.
bank_name	varchar(100)		Employee bank name.

health

Stores employee health, insurance and leave information.

Field	Data type	Key / link	Simple meaning
health_id	varchar(20)	Primary Key	Unique ID for a health record.
employee_id	int	Link to employee	Identifies the employee connected to the health record.
created_at	datetime		Date and time the health record was created.
updated_at	datetime		Date and time the health record was last updated.
medical_leave_eligible	varchar(5)		Shows whether the employee is eligible for medical leave.
insurance_status	varchar(20)		Employee insurance status.
insurance_provider	varchar(100)		Insurance provider.
policy_number	varchar(20)		Insurance policy number.
insurance_plan_type	varchar(20)		Type of insurance plan.
medical_leave_balance	int		Remaining medical leave balance.

How the tables fit together

- Employee is the main employee list.
- Department connects employees to their departments using department_code.
- Employee Performance connects employees to yearly performance results.
- Education connects employees to their education records.
- Finance stores salary and allowance information.
- Health stores insurance and medical leave information.
- Department Performance stores department-level performance, revenue, cost and training information.

Key links

The main employee identifier is `employee_id`. Department information is linked through `department_code`. Employee performance uses `employee_id` and `year` to identify yearly performance records.
